

### The Workplace In The Era Of The Jetsons:

#### *A Look At How Technology Has And Will Continue To Change Our Lives*

1. Technology in the workplace over the last 20 – 30 years has evolved faster and more than any of us expected or could have imagined.
2. Telework and remote work have become more prevalent, partly because of the advances in technology and partly because of COVID.
3. Virtual meetings and virtual work have increased along with the increase of telework and remote work, again partly because of the advances in technology and partly because of COVID.
4. Hoteling and hot desking, whereby an employer sets aside one or more “generic” offices for employees who only occasionally come into the office, has also become popular in recent years.
5. While no one knows what the future holds or how much more workplaces will change in the next 20 – 30 years, the one thing that is certain is that they will continue to evolve, and the next generation likely will be wondering how we were able to work with such antiquated technology as laptop computers, smart phones, Zoom meetings, etc.
